EasyDo Digital Technologies

DevOps Engineer

Description

Empowering our Clients with People-Driven Digital Innovation Across Europe

We are a Group managing digital IT services and solutions , driven by people, innovation, agility, and deep industry insight. We are working with the largest private and public institutions to deliver IT services and solutions. Being an entrepreneurial digital services group with a Human-Sized Tech Company, we are built by passionate experts and led by seasoned leaders in IT and digital transformation.

Responsibilities

- Provide the guidelines and expertise necessary when developing the DevOps process adapted to each project;
- Provide expertise and coach project teams on the DevOps chain to ensure optimized implementation time and product quality;
- Participate in the development of a "containerization" strategy allowing the construction of scalable solutions;
- Participate in the dissemination of a homogeneous DevOps culture within the different products.
- Ensure the proper functioning of the continuous integration chain tools as well as development-related tools such as qualimetry, code and binary repositories;
- Ensure the proper functioning of continuous deployment tools;
- Ensure compliance with the principles of immutable architecture;
- Provide end-to-end support on the DevOps toolchain;
- Promote the adoption of "containerized" deployment in a front/back/micro-services architecture;
- Help set up application monitoring and alerting;
- Help resolve DevOps process or tool issues;
- Ensure transversality and communication around DevOps best practices;
- Help with resolving application malfunctions (route cause, etc.) and sizing applications/infrastructure.

Qualifications

- Technical expertise on source code versioning, integration, deployment and automation tools;
- Experience in designing and implementing end-to-end DevOps processes from business to Ops;
- Mastery of IT best practices in a RUN and operating context;
- Coding and scripting abilities.
- Mastery of a wide variety of Open Source technologies and tools (Gitlab, Gitlab CI, Anthos, Artifactory, Sonar, Docker, Kubernetes, Ansible, Terraform…);
- Significant experience in Linux / Unix administration;
- In-depth knowledge of cloud solutions (GCP);
- Knowledge of monitoring/alerting tools.
