EasyDo Digital Technologies

IT OPS Engineer (Windows) with French

Description
Empowering our Clients with People-Driven Digital Innovation Across Europe

We are a Group managing digital IT services and solutions , driven by people, innovation, agility, and deep industry insight. We are working with the largest private and public institutions to deliver IT services and solutions.Being an entrepreneurial digital services group with a Human-Sized Tech Company, we are built by passionate experts and led by seasoned leaders in IT and digital transformation.

Context:

The IT OPS Engineer is the main guarantor of production throughout the project lifecycle. They play a key role in addressing production requirements and contribute to defining technical solutions, ensuring their implementation within IT teams. They are responsible for maintaining the stability of non-production and production environments. Activities follow an Agile and DevOps approach, including the implementation of technical user stories and continuous backlog management.

Responsibilities

- Application Migration to the Cloud:
- Perform the migration of external Windows-based software (e.g., SAS, Qlik, BO, etc.) and .NET applications to the company's cloud infrastructure, in collaboration with cloud infrastructure teams.
- Contribute to the definition and continuous improvement of cloud migration standards
- Definition of Technical Solutions:
- Promote the use of existing services to optimize costs and implementation timelines, integrating operational requirements into the project backlog.
- Recommend reusable solutions where new developments are needed.
- Anticipate compliance, architecture standards, and cybersecurity requirements when selecting technical solutions.
- Work closely with product and delivery teams depending on project needs.
- Technical Implementation:
- Collaborate with various IT and operational stakeholders.
- Set up appropriate logging, monitoring, and alerting mechanisms in coordination with SRE teams.
- Ensure availability of production resources (environments, monitoring, performance) and infrastructure to support solution deployment.
- Acquire sufficient application knowledge to detect and troubleshoot bottlenecks (e.g., data flows, security, network).
- Provision all required infrastructure elements such as platforms, data flows, databases, middleware, certificates, and network access.
- Perform technical testing (e.g., performance, recovery) before production release.
- Ensure all required documentation is completed prior to go-live.
- Monitor and manage activities in the project backlog.
  Define Incident & Continuity Plans with application stakeholders.
  Manage and follow up on changes and incidents related to the application scope.
