Network Security Specialist with French

Description

Main mission: ensure a secure, resilient production environment that complies with requirements and best practices, protecting critical systems, data, and operations from internal and external cyber threats.

Important note: The ideal profile should have hands-on experience with **enterprise network security environments**, including large-scale corporate network infrastructures. Experience in banking, financial services, or other complex and highly regulated environments is considered a strong plus. Please note that the role is focused on **enterprise networking**, rather than telecom/service provider networking.

Responsibilities

- o Implementing firewall flows on various filtering devices according to validated requests via internal tools.
- o Ensuring proper deployment of Group and Local Security Policies on FW, Proxy, and WAF devices.
- o Partnering with projects and ITRM teams to implement flows, including application flows.
- o Conducting technical investigations needed to resolve incidents or blockages.
- o Implement filtering rules on all filtering equipment (Firewall, Router, Proxy, WAF, etc.) in compliance with current security policies and the "Firewall Request Management" procedure.
- o Act as liaison with the business units' security departments, security production teams, and technical architecture teams to evolve risk analysis matrices in line with needs and automation goals.
- o Serve as the technical point of contact for vendors to manage the filtering solutions/products.
- o Promote and implement security best practices, be proactive in proposing and developing continuous improvement initiatives.
- o Operationally implement security policies for filtering tools.
- o Manage incidents within scope, including continuous monitoring of solutions.
- o Configure the tools within their scope.
- o Ensure the longevity of technical solutions and manage obsolescence.
- o Ensure proper application functioning, maintainability, and scalability (Access, Logs, Monitoring).
- o Analyze and fix functional or technical anomalies reported by users of operational security solutions.
- o Handle version upgrades and evolutions, maintaining consistency across the application landscape.
- o Ensure achievement of action plan objectives in their area (availability rate, incident resolution time, etc.).
- o Formalize procedural frameworks to support operational processes.

Qualifications

Mandatory:

- o At least 3 years of proven experience in network security (**enterprise network**
