EasyDo Digital Technologies

Oracle Database Administrator with ExaCC

Description
Empowering our Clients with People-Driven Digital Innovation Across Europe

We are a Group managing digital IT services and solutions , driven by people, innovation, agility, and deep industry insight. We are working with the largest private and public institutions to deliver IT services and solutions.

Being an entrepreneurial digital services group with a Human-Sized Tech Company, we are built by passionate experts and led by seasoned leaders in IT and digital transformation.

Responsibilities
DBA-tasks:
• Maintenance and support of day-to-day business in the database team
• Implementation of database services after commissioning
• Create new databases and environments in an extended RAC environment
• Set up services for applications considering specifics such as not RAC capable
• Guarantee reliability or proactive participation in measures to avoid production downtime
• Solving production downtimes competently and promptly
• Conversion of Oracle CDB/ PDB databases
• Analyzing and defining cardinalities for old applications on RAC
• Participation in release assignments
• Provision of participation services from the database team in projects, e.g. Move2Cloud and in regulatory requirements as well as POCs
• Systematically analyze security gaps and develop solutions
• Analyze and fix performance issues
• Optimize database monitoring
• Set up backup and ensure fast recovery times through regular testing during environment setup
• Onboarding new DB users to CyberArk
• Support of the Oracle Apex application as well as participation in the patching of these
• Participation and further development of the Database Information System (DBI)
• By arrangement, in exceptional cases, readiness for weekend assignments and on-call duty required

Automation tasks:
• Support in the automation of pseudonymization of data after a database rebuild by means of ETL development
• Systematically evaluate the DB parameters across all databases and script necessary changes to further automate
• Provide Views and Selects for database information systems to implement systematic quality checks
• Further develop Ansible scripts for inline patching and extend them for PDB
• Participation in patching Oracle databases and, if necessary, other DB technologies
• Ensure Git versioning
• Standardize Oratab and Oracle Home settings
• Adapting existing scripts for Cloud Move
