Performance Testing Engineer

Hiring organization
EasyDo Digital Technologies

Employment Type
Full-time

Job Location
Romania

Date posted
September 14, 2026

Description

We are looking for a Performance Testing Engineer to ensure our applications deliver strong performance, scalability, and reliability before reaching production.

You will work closely with developers, testers, architects, DevOps, infrastructure teams, and business stakeholders to plan, execute, analyze, and improve performance testing across enterprise applications and modern cloud-native environments.

Responsibilities

- Define **performance testing strategies, workload models, test plans, and success criteria** based on business and technical requirements.
- Design and execute **Load, Stress, Spike, Soak/Endurance, Scalability, and Capacity tests**.
- Develop and maintain **reusable performance test scripts**, including parametrization, correlation, and dynamic data handling.
- Test **Web applications, REST/SOAP APIs, microservices**, and mobile applications where applicable.
- Analyze **response times, throughput, errors, transaction success rates, resource utilization, and scalability**.
- Identify performance bottlenecks and perform **root cause analysis** using application and infrastructure metrics.
- Create performance test reports and communicate findings and recommendations to technical and non-technical stakeholders.
- Work closely with **developers, architects, DevOps, infrastructure, and business teams** to resolve performance issues.
- Support **performance optimization, scalability, and capacity planning** activities.
- Contribute to **performance testing automation and CI/CD integration**.

Qualifications

- Hands-on experience with at least one performance testing tool, preferably **OpenText LoadRunner Enterprise / VuGen / Analysis**.
- Experience with **JMeter, Gatling, k6, NeoLoad or BlazeMeter** is a plus.
- Good understanding of **performance testing methodologies, workload modelling, scalability, capacity, and bottleneck analysis**.
- Good knowledge of **HTTP/HTTPS, REST APIs, SOAP, Web applications, distributed systems, and microservices**.
- Scripting experience with **JavaScript, Java, Python, or Groovy**. JavaScript is preferred.
- Experience with monitoring/observability tools such as **Dynatrace, AppDynamics, Grafana, Datadog, Splunk, ELK, or Icinga** is an advantage.
- Basic knowledge of **Git and CI/CD** tools such as GitLab CI, Jenkins, Azure DevOps, or GitHub Actions.
- English – advanced.

Nice to Have

- **Kubernetes**
- **Azure, AWS, or GCP**
- Cloud scaling concepts (**HPA**/**VPA**)

Job Benefits

o Competitive salary and the opportunity to have a meaningful job where you can make a difference
o The chance to continuously evolve as a professional
o Medical insurance & Meal tickets.
